Executive Summary

On behalf of the Boston Parks and Recreation Department, Stantec Planning and Landscape Architecture, P.C. (Stantec) is pleased to submit this Notice of Intent (NOI) to the Boston Conservation Commission, pursuant to the Massachusetts Wetlands Protection Act and its regulations (WPA; 310 CMR 10.00), to renovate Reservation Road Park (Project). This work will occur within the 100-foot Buffer zone and with limited work proposed within 25-foot Riverfront Area (RFA) associated with Mother Brook, a perennial watercourse. Wetland resource areas were delineated by Stantec Consulting Services Inc. on April 20, 2017.

The Project proposes to renovate the park through planting restoration of a portion of disturbed land encroached on by an abutter, improvements to site amenities and property circulation, reconstruction of a deteriorating parking lot and skate park, replacement of the park's existing sediment forebay and open-air detention pond with a subsurface detention system, installation of a boardwalk for pedestrian use, and creation of a stone path to the water's edge.

A USGS Site Locus and additional figures, which illustrate the Project location and surrounding physical and environmental features, are provided in Appendix G. Project Plans are provided in Appendix F. The Project and proposed measures to avoid and minimize impacts to the environment are described in the following sections of this narrative.

B. Fees

Fee should be calculated using the following process & worksheet. **Please see Instructions before filling out worksheet.**

Step 1/Type of Activity: Describe each type of activity that will occur in wetland resource area and buffer zone.

Step 2/Number of Activities: Identify the number of each type of activity.

Step 3/Individual Activity Fee: Identify each activity fee from the six project categories listed in the instructions.

Step 4/Subtotal Activity Fee: Multiply the number of activities (identified in Step 2) times the fee per category (identified in Step 3) to reach a subtotal fee amount. Note: If any of these activities are in a Riverfront Area in addition to another Resource Area or the Buffer Zone, the fee per activity should be multiplied by 1.5 and then added to the subtotal amount.

Step 5/Total Project Fee: Determine the total project fee by adding the subtotal amounts from Step 4.

Step 6/Fee Payments: To calculate the state share of the fee, divide the total fee in half and subtract \$12.50. To calculate the city/town share of the fee, divide the total fee in half and add \$12.50.

To calculate filing fees, refer to the category fee list and examples in the instructions for filling out WPA Form 3 (Notice of Intent).

3.0 SECTION A - PROJECT DESCRIPTION

3.1 EXISTING CONDITIONS

The project site is located at 151 Reservation Road, owned by the City of Boston (the "City"). The property is an 8.5 ± acre parcel, excluding Reservation Road, situated to the east and south of Mother Brook, a perennial watercourse that flows north and passing under Reservation Road.

Mean Annual High Water Line (MAHWL) and inland bank, associated with Mother Brook, occurs along the west and northern portion of the City property. The brook's 25-foot Riverfront Area (RFA) encompasses the western and northern region of the property (approximately 0.76± acres). Slopes leading to Mother Brook within these areas are dominated by invasive species, including black locust, Asiatic bittersweet, and honeysuckle as described in Appendix D - Resource Area Delineation.

The U.S. Department of Agriculture (USDA) Web Soil Survey maps for the Project site identifies the soil type as wet substratum Udorthents (disturbed soils where the upper material has been removed, filled, or graded), with 0 to 3 percent slopes.

Within the project limits, stormwater is managed in various ways. Stormwater captured on the turf field infiltrates to the drainage network beneath the field, eventually discharging to the existing sediment forebay and detention pond located west of the field. Stormwater from the skate park, parking lot, and surrounding landscaped areas are captured and conveyed through a drainage network to the sediment forebay and detention pond. The detention pond eventually overflows through an outlet control device and discharges stormwater to Mother Brook.

The remaining portion of the site discharges west directly to Mother Brook or east to property owned by the Massachusetts Bay Transportation Authority (MBTA), eventually flowing into Mother Brook downstream of the park.

3.2 PROPOSED CONDITIONS

In proposed conditions, Reservation Road Park will be redeveloped to enhance the existing features deteriorating on site. Of the 8.5± acres, approximately 4.85± acres will be included within the limits of work. Various site amenities and walkways will be repaved or introduced to the site to provide improved park circulation. The adjacent parking lot and skate park will be reconstructed to generate increased public use.

A section of the property has been encroached on by an abutter. As part of the project, the City will reclaim the approximate 3,800 sf of land used as storage for utility vehicles and construction equipment. The area will be restored with loam, trees, and shrubs to naturalize this section of the Site.

The work will include improvements to the existing stormwater management system. A combined sediment forebay and detention pond located on the northern portion of the site will be converted to a subsurface detention system.

Below is a summary of the existing and proposed conditions impervious areas.

Table 1 Summary of Impervious Areas on Site

Areas	Existing Conditions (sf)	Proposed Conditions (sf)
Total Impervious	55,154	55,123
Total Impervious Reduction		31

4.0 SECTION B - BUFFER ZONE AND RESOURCE AREA IMPACTS

4.1 DESCRIPTION OF BUFFER ZONE AND RESOURCE AREA IMPACTED

The 8.5-acre property contains areas subject to the jurisdiction of the Massachusetts Wetlands Protection Act [M.G.L. c. 131, s. 40]. These resource areas are associated with Mother Brook and its floodplain and include the following:

- Bordering Land Subject to Flooding (BLSF)
- 100-foot Buffer Zone
- Riverfront Area

Wetland resources on the property were delineated by Stantec Consulting on April 20, 2017.

Of the three aforementioned buffer zones and resource areas, only the 100-foot Buffer Zone and Riverfront Area are located within the Site limits and impacted by the proposed work.

4.1.1 100-Foot Buffer Zone

The Buffer Zone, as established through 310 CMR 10.02, is shown as a 100-foot offset from any resource area subject to protection under 310 CMR 10.02(1). The resource area that the 100-foot buffer zone refers to in relation to Mother Brook is the Mean Annual High Water Line (MAHWL).

4.1.2 Riverfront Area

Mother Brook, a perennial watercourse, has an associated 25-foot RFA established through the Massachusetts Wetlands Protection Act (MWPA) regulations. Per 310 CMR 10.58(2)(a)(3), the RFA is the area of land between a river's MAHWL and a parallel line measured horizontally 25-feet away due to the City of Boston designation as a densely developed area.

The MAHWL was established by Stantec Consulting on April 20, 2017 with the use of blue wetland flags A-1 through A-57 which are depicted on the existing conditions plan provided within the plan set, *Improvements to Reservation Road Park, dated June 6, 2018* provided under a separate cover.

4.2 IMPACTS TO BUFFER ZONE AND RESOURCE AREA

4.2.1 100-Foot Buffer Zone

Work within the 100' Buffer Zone will include minor activities and activities subject to review under this Notice of Intent.

The reclamation of the 3800 sf of paved land used for storage of utility vehicles and construction equipment will be a minor activity in accordance with 310 CMR 10.02(b)1.f.; the conversion of impervious to vegetated surfaces, provided erosion and sedimentation controls are implemented during construction. The area will be restored to a planted area with the use of loam, trees, and shrubs. Straw wattles and siltation fence will be installed as protection during the planting restoration process. The restoration of this area will aid in the permanent increase of pervious area within the 100-foot buffer zone, offsetting some of the additional activities described below.

Activities within the buffer zone, subject to review under this Notice of Intent, include rehabilitation of the existing impervious sidewalks and associated site amenities, installation of a new boardwalk and stone path to the water's edge, conversion of combined sediment forebay and detention pond to a subsurface detention system, and improvements to the existing athletic field. The proposed improvements will result in an increase in additional pervious area in this Buffer Zone.

4.2.2 Riverfront Area

Work within the Riverfront Area will be limited to two (2) pedestrian access points. A boardwalk is proposed to be located on the southeast corner of the Site and a small stone path is to be located on the northern corner of the Site. The Site currently has an existing path leading down to the Riverfront Area's edge where a seating area is situated. These existing features are located outside of the 25-foot Riverfront Area associated with Mother Brook. The boardwalk is proposed to extend beyond the seating area towards the water's edge as an additional amenity for pedestrian use. The small stone path will utilize degraded areas beneath an existing canopy to create a guided path to the edge of Mother Brook. Both paths will provide a controlled access point to Mother Brook and promote limited foot traffic in other areas of the 25-foot RFA that have the ability to cause damage to the existing vegetation overtime.

The construction of the both paths aim to have minimal impact on the RFA. The footings of the boardwalk will be constructed using helical piles to minimize the footprint of excavation. It will be raised and consist of wooden slats elevated above finished grade. The wooden slats will have separation between them and will not act as an impervious area. The stone path will be installed carefully by hand.

Refer to *Table 2 Summary of Affected Resource Areas* for the temporary and permanent disturbances expected due to the proposed work.

Table 2 Summary of Affected Resource Areas

Wetland Resource Area	Associated Resource	Temporary Disturbance (sf)	Impervious Area	
			Existing	Proposed
25-Foot Riverfront Area	MAHWL	2,050	100	95
100-Foot Buffer Zone	MAHWL	18,700	4590	10,995

4.3 BUFFER ZONE AND RESOURCE AREA COMPLIANCE WITH GENERAL STANDARDS

4.3.1 100-Foot Buffer Zone

Pursuant to 310 CMR 10.05(3)(a)2, all work proposed to be performed within the Buffer Zone has been addressed within this Notice of Intent under Section 4.2.1, 100-Foot Buffer Zone.

Best Management Practices (BMPs) that have been incorporated into the redevelopment design are described in Appendix E, Stormwater Report. These BMPs ensure that land disturbance within the Buffer Zone does not impact resource areas. These BMPs ensure the land disturbance within the Buffer Zone does not negatively impact wetland resource areas and will secure the protection of those interests.

4.3.2 Riverfront Area

4.3.2.1 310 CMR 10.58(4) Compliance with General Performance Standards for Previously Developed Riverfront Areas

The work proposed in the RFA meets the definition of a redevelopment and is regulated by 310 CMR 10.58(5), which provides that the Conservation Commission may allow work to redevelop a previously developed RFA, provided the proposed work improves existing conditions and meets the performance standards listed in 10.58(5).

10.58(4)(a) Improvement over Existing Conditions: Pursuant to 310 CMR 10.58(4)(a), the work meets the performance standards for all other resource areas within the RFA. The proposed work is also within the buffer zone. Therefore, the performance standards for the RFA shall contribute to the protection of the interests of M.G.L. c. 131 § 40 in lieu of any additional requirements that might otherwise be imposed on work in the buffer zone within the riverfront area.

The proposed work aims to remain outside the riverfront area excluding the installation of two pedestrian access paths which will have minimal impacts. The addition of the boardwalk and stone path will provide a controlled access to the water's edge. It will help limit disturbance by park visitors to the surrounding resource areas and the buffer zone.

10.58(4)(b) Protection of Rare Species: Pursuant to 310 CMR 10.58(4)(b), no project may be permitted within the riverfront area which will have any adverse effect on specified habitat sites of rare wetland or upland vertebrate or invertebrate species prior to the filing of the Notice of Intent.

There are no rare species located within the Site. Therefore, the project will not have an adverse effect on specified habitat sites of rare wetland or upland vertebrate or invertebrate species (*Appendix G – Figure 4.*).

10.58(4)(c) Practicable and Substantially Equivalent Economic Alternatives: Pursuant to 310 CMR 10.58(5), the work is determined to be a redevelopment project within previously developed Riverfront Areas and is not required to perform an alternatives analysis. Refer to Section 4.3.2.2 - 310 CMR 10.58(5) Redevelopment Within Previously Developed Riverfront Areas; Restoration and Mitigation for further description of the redevelopment work.

10.58(4)(d) No Significant Adverse Impact: Pursuant to 310 CMR 10.58(5), the work is determined to be a redevelopment project within previously developed Riverfront Areas and is not required to perform an alternatives

analysis. Refer to Section 4.3.2.2 - 310 CMR 10.58(5) Redevelopment Within Previously Developed Riverfront Areas; Restoration and Mitigation for further description of the redevelopment work.

4.3.2.2 310 CMR 10.58(5) Redevelopment Within Previously Developed Riverfront Areas; Restoration and Mitigation

Pursuant to 310 CMR 10.58(5), notwithstanding the provisions of 310 CMR 10.58(4)(c) and (d) (setting forth the otherwise applicable general performance standards), the proposed work redeveloping the previously developed Riverfront Area on-site may be allowed by the Boston Conservation Commission, where the work will improve existing conditions. Existing conditions may be redeveloped where the work involved includes one or more of the following: the replacement, rehabilitation or expansion of existing structures, improvement of existing roads, or the reuse of degraded and/or previously developed areas. A previously developed Riverfront Area is comprised of areas degraded prior to August 7, 1996 by impervious surfaces from existing structures or pavement, absence of topsoil, junkyards, or abandoned dumping grounds.

The Site was developed prior to August 7, 1996, as evidenced by the Order of Taking, dated August 31, 1981, provided in Appendix H - Lot Documentation.

The following section describes how the proposed work within Previously Developed Riverfront Area meets the performance standards:

10.58(5)(a) Improvement over existing conditions: At a minimum, the proposed work will result in an improvement over existing conditions of the capacity of the Riverfront Area to protect the interests identified in M.G.L. c. 131 § 40 that are applicable to the Project. As noted in Section 4, the applicable interests of the Wetlands Protection Act are protected.

Work within the Riverfront Area will be limited to two (2) new access points be installed for pedestrian use. The construction of the boardwalk and stone path will provide controlled access points to the water's edge. It will assist to limit disturbance by park visitors to the surrounding resource areas and the buffer zone.

In addition, a portion of the land encroached upon by an abutter lies within the riverfront area, approximately 100 SF. The land is paved and utilized as a storage space for utility vehicles and construction equipment. Stormwater runoff from this area flows directly over land and into Mother Brook. The City proposes to reclaim this area and replace it with natural vegetation.

10.58(5)(b): Stormwater management: Stormwater management for the Project has been designed in compliance with the Stormwater Management Standards as outlined in 310 CMR 10.05(6)(k) through (q) and defined in detail in the DEP's Stormwater Management Handbook. The proposed stormwater management system is described in detail in the Stormwater Report, Appendix E - Stormwater Report, and Site Plans, Appendix F - Site Plans, of this Notice.

10.58(5)(c) Proposed work shall not be located closer to the River: Portions of the 25-foot RFA on Site have been previously disturbed. As part of the proposed Project, the new boardwalk and stone path will extend closer to the River in two (2) specified areas. Measures will be taken to reduce the impact the boardwalk and stone path will have on Site.

The stone path will be installed in an area previously degraded, underneath the canopy of existing trees. The individual stones will be installed carefully by hand as to have minimal impact on the RFA. The boardwalk

construction will include the use of helical piles for the footings and wooden slats for the boardwalk surface. The creation of the paths will promote access to the river in two (2) locations rather than prompting pedestrians to walk directly to the river's edge potentially impacting the 25-foot riverfront area overtime. Although a new structure will be permanently located closer to Mother Brook, the goal of the boardwalk installation is to provide long-term protection on the surrounding 25-foot Riverfront area.

10.58(5)(d) Location of proposed work outside the Riverfront Area or toward the Riverfront Area boundary:

Most of the proposed work will be located outside the Riverfront area. A small portion of the proposed work will include the installation of a new stone path and boardwalk. The new stone path will be located within previously degraded areas and under the canopy of existing trees. The boardwalk will not be located within previously disturbed Riverfront Area. However, the intention of the stone path and boardwalk is to provide controlled pedestrian access to the water's edge resulting in long-term protection of the remaining RFA on the City's property.

10.58(5)(e) Proposed work shall not exceed the amount of degraded area: The area of proposed work within the RFA will reduce the amount of impervious surfaces. A portion of the paved area encroached upon by an abutter will be reclaimed through planting restoration. The new stone path will be located within the previously degraded RFA areas and under the canopy of existing trees. The work performed will not exceed existing impervious surface areas within the RFA.

The installation of the boardwalk will include the removal up to 1500 sf of vegetation. Although this will increase the non-vegetated areas in proposed conditions, the intention is to provide long-term protection of the RFA with the provision of a controlled access point to Mother Brook. Refer to Table 3 25-foot Riverfront Area Degradation for a breakdown of the areas.

Table 3 25-foot Riverfront Area Degradation

Degradation Classification	Existing Conditions (sf)	Proposed Conditions (sf)
Impervious Surface	262	257
Non-vegetated	2030	3560

The area of degradation is based on the 25-foot Rivefront Area delineated and shown on the Existing Conditions Plan provided in the NOI plan set, *Improvements to Reservation Road Park, dated June 6, 2018*, provided in Appendix F - Site Plans.

10.58(5)(f) Restoration on-site of degraded Riverfront Area notwithstanding the criteria of 10.58(5)(c), (d), and (e): The Project is meeting the Standards of 10.58(5)(c), (d) and (e), therefore this Standard is not applicable.

10.58(5)(g) Mitigation of Riverfront Area: The proposed work within the Riverfront Area will be limited to within the existing degraded areas therefore mitigation within the Riverfront Area is not applicable.

10.58(5)(h) Demonstrate Restoration or Mitigation has been completed: Standard 10.58(5)(f) and (g) are not applicable to meeting, therefore this Standard is not applicable as well.

5.0 SECTION C – OTHER APPLICABLE STANDARDS AND REQUIREMENTS

7.0 CONCLUSION

Boston Parks and Recreation Department is seeking Boston Conservation Commission (BCC) approval for Renovations to Reservation Road Park within regulated Wetland Resource Areas. The BCC is also asked to consider

this project as Redevelopment, as defined in 310 CMR 10.4. The proposed work has been designed to avoid, minimize, and mitigate the extent of environmental impacts to the maximum extent practicable. More specifically, the project will:

- Avoid direct impacts to wetland resource areas proximate to the project route.
- Employ sedimentation and erosion controls to avoid secondary impacts to proximate wetland resource areas.
- Reclaim an area of land encroached on by an abutter and restore the land to a natural vegetative state .

Reservation Road Park, Hyde Park (Boston), MA**

On Thursday, April 20, 2017, Stantec Consulting Services Inc. (Stantec) conducted a site visit to the Reservation Road Park, located in the Hyde Park neighborhood of Boston, Massachusetts, to delineate wetlands and waterways subject to protection under the Massachusetts Wetlands Protection Act and regulations (WPA; 310 CMR 10.00), and Sections 401 and 404 of the federal Clean Water Act (CWA). This memorandum describes the areas included in the wetland delineation (Study Area), the wetland delineation field methods, and provides a summary of field-delineated waterways and jurisdictional natural resource boundaries identified within the Study Area.

GENERAL SITE DESCRIPTION

The Study Area is bounded to the east by a commuter rail line, by a commercial property to the south, and to the west and north by Mother Brook, a perennial watercourse that borders the sides of the Study Area. Approximately two-thirds of the Study Area consists of developed lands including parking areas, an athletic field, and a skateboard park. The southern portion of the Study Area, south of Reservation Road, is characterized by an undeveloped forested area.

Mother Brook flows north along the western limit of the Study Area for approximately 1,000 feet before passing under Reservation Road and turning northeast and east to flow under the rail line. The slopes leading to Mother Brook as well as the undeveloped southern portion of the Study Area, are dominated by invasive species, including black locust (*Robinia pseudoacacia*), Asiatic bittersweet (*Celastrus orbiculatus*), and honeysuckle (*Lonicera* spp.). Native species observed include black cherry (*Prunus serotina*), greenbrier (*Smilax rotundifolia*), and poison ivy (*Toxicodendron radicans*).

The U.S. Department of Agriculture (USDA) Web Soil Survey maps for the Study Area identify the soil type within the Study Area as wet substratum Udorthents (disturbed soils where the upper material has been removed, filled, or graded), with 0 to 3 percent slopes.

WETLAND DELINEATION METHODS

The wetland delineation was conducted using the methodologies outlined in the WPA, the Massachusetts Department of Environmental Protection's (MassDEP) Delineating Bordering Vegetated Wetlands Under the Massachusetts Wetlands Protection Act: A Handbook; the U.S. Army Corps of Engineers' (Corps) 1987 Wetlands Delineation Manual; and the Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Northcentral and Northeast Region (Version 2.0, January 2012). The boundaries of field-delineated jurisdictional wetland resources identified within the Study Area were flagged with sequentially labeled flagging tape.

Reference: Wetlands Delineation

The Rivers School, Weston, MA

DESCRIPTION OF FIELD-DELINEATED RESOURCE AREAS

Jurisdictional boundaries delineated by Stantec include inland Bank and Mean Annual High Water Line (MAHWL) associated with Mother Brook. Field-delineated jurisdictional areas are described in the following sections. Representative site photographs are provided in Attachment A.

INLAND BANK/MEAN ANNUAL HIGH WATER LINE OF MOTHER BROOK

Blue wetland flags A-1 through A-57 delineate inland Bank and the MAHWL of Mother Brook, which are coincident within the Study Area. Limits of Bank/MAHWL were identified by observation of one or more field characteristics such as water-stained leaves, an abrupt break in slope, and lack of vegetation near the water's edge. Pursuant to the Wetlands Protection Act regulations, Buffer Zone associated with Bank of Mother Brook extends 100 feet landward from the A-series flags.

OTHER RESOURCE AREAS

RIVERFRONT AREA

Mother Brook is shown as perennial on the current United States Geological Survey map for the Study Area. Pursuant to the WPA regulations, Riverfront Area extends 25 feet landward from the MAHWL as delineated by the A-series flagging. The outer limits of Riverfront Area were not delineated in the field.

BORDERING LAND SUBJECT TO FLOODING (BLSF)

According to Federal Emergency Management Agency (FEMA) maps on the MassGIS website, the limit of 100-year flooding (i.e., Bordering Land Subject to Flooding; BLSF) within the Study Area is shown as a narrow band, ranging from approximately 10-50 feet wide, located along Mother Brook, south of Reservation Road. The 100-year flood zone does not appear to occur within the portion of the the Study Area north of the crossing of Reservation Road over Mother Brook. The regulated floodway, zone AE, appears to be largely coincident with the field delineated limit of Bank/MAHWL of the brook. The limits of BLSF were not delineated in the field.
