

2016 BOSTON BICYCLE COUNTS

Measuring how many people ride bikes in the City.

June & September

CITY OF BOSTON | TRANSPORTATION DEPARTMENT

Mayor Martin J. Walsh

Chief Chris Osgood

Commissioner Gina N. Fiandaca

INTRODUCTION

In 2016, the Boston Transportation Department took its first steps in creating an annual program using automated technology to count the number of people bicycling. We researched the available technologies, their potential drawbacks, and reviewed count programs in several sister cities to identify best practices. We piloted counts in 24 locations in June and executed the full program in September.

In previous years, teams of volunteers counted the number of people they saw on bikes at a variety of locations during peak commute times on one of several days in September. While this information has been helpful, we knew it had real limitations. Counts weren't always done during the same day of the year and didn't align year-over-year. We missed everyone who was biking outside the peak commute times. Our volunteers, as steadfast as they were, could not be at every location each year -- and we didn't want to send them out in very poor weather either.

With the annual automated counts program, we are improving the quality of our data by:

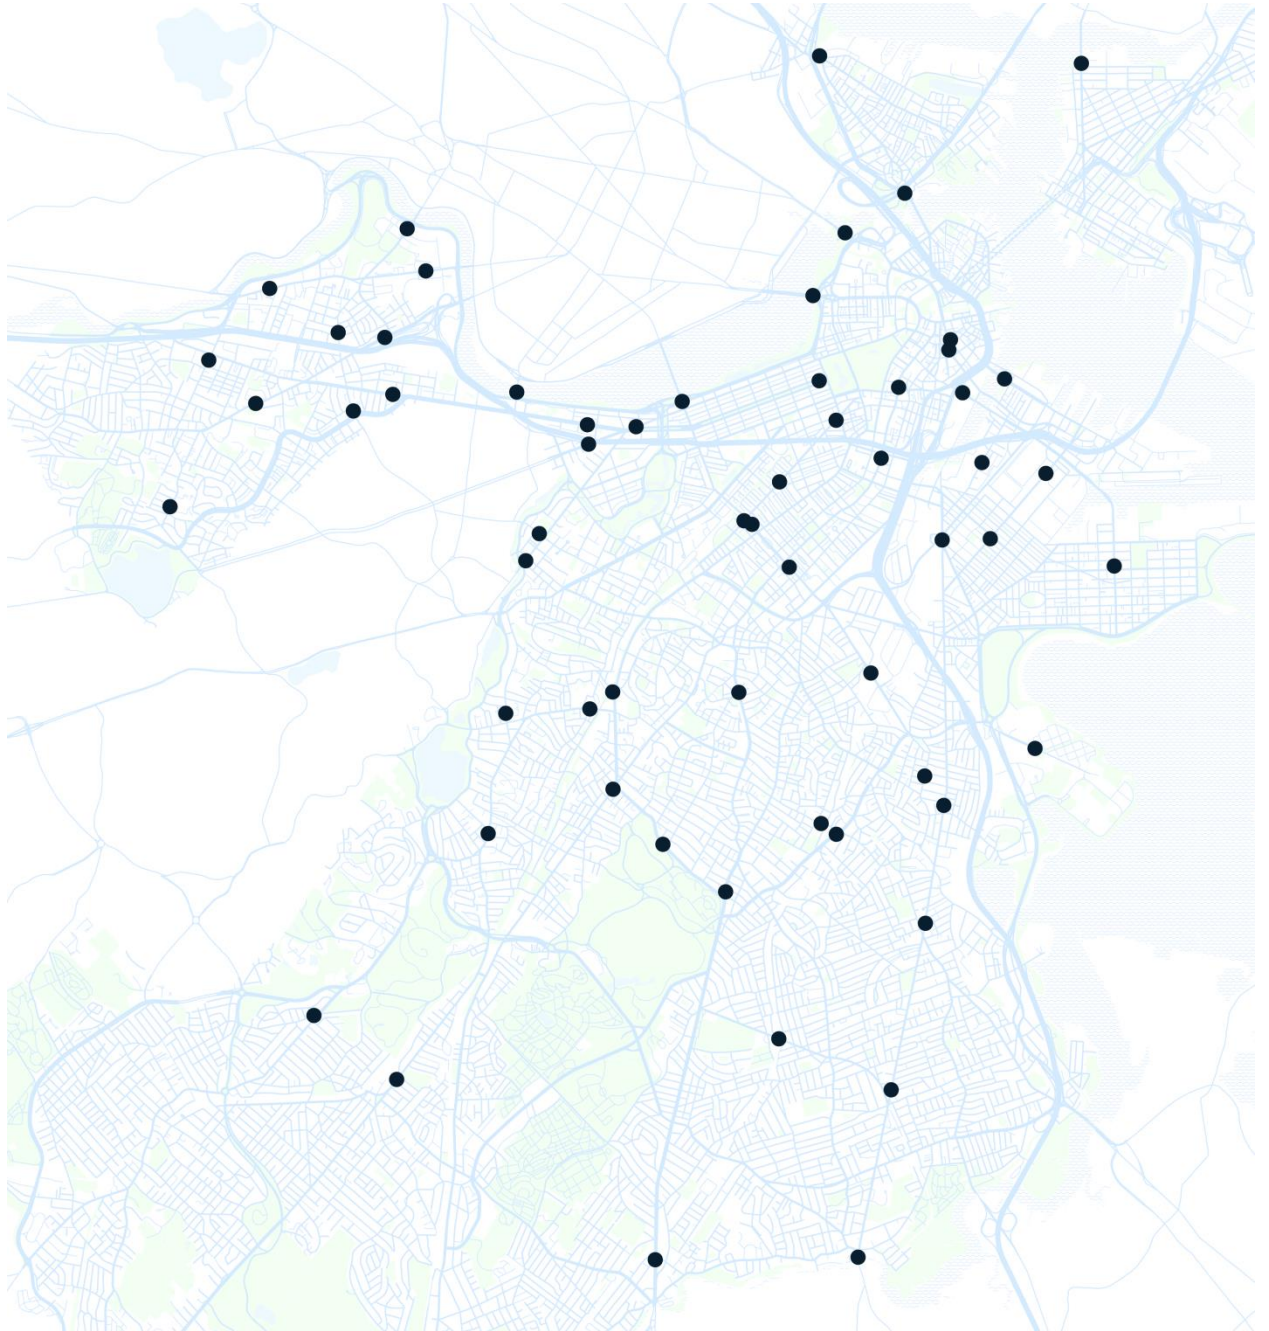

- Collecting information about trips that happen outside of peak commuting hours
- Diversifying the types of locations that are counted
- Standardizing the dates and hours of counts, year-over-year
- Ensuring counts are done, regardless of weather

Better data helps us do better in planning and designing our bike network. We'll be able to develop factors to understand how many people are biking on certain types of routes in certain contexts. ("If X people bike on this street today, we can expect Y people to bike on a similar street today.") We can also begin to normalize other counts taken at other times of the year. ("If X people ride here on a colder morning in November, we can expect Y people to ride here on a warmer evening in June.") We may also be able to project how many people would ride on new routes or different facilities as those projects are being planned and designed. ("If we add a separated bike lane here, we can expect Z more people to bike on this route.")

Better data also helps us in looking back and assessing our progress in promoting bicycling as a mode of transportation in Boston. We can better answer questions such as: Has ridership changed on key routes? Have we encouraged more people to ride by building a more connected network? Has the presence of new bike share stations influenced bike-riding on nearby streets?

COUNT LOCATIONS

We are committing to annual counts at these 60 locations across Boston. To select these locations we looked at the type of street, the type of bike accommodation (if any), and the nearby land uses. Our Boston Bikes Advisory Group provided feedback and guidance on the locations.

JUNE 2016 PILOT COUNTS

During the weeks of June 8-22, 2016 automated traffic counts were conducted at 24 locations across Boston. Depending on the location, the counts were conducted for 24, 48, or 96 hours.

For these counts, we used several techniques to test durability and accuracy. At some locations, we placed tubes across the street to capture the number of bikes, the number of vehicles, and the speed of vehicles. We used specially-ordered tubes that are more sensitive to the lighter weights of people riding bikes.

Where street sweeping was scheduled during the count period -- and would therefore break the tubes -- we tested video counting technologies. The videos were then run through software that classified vehicles as bicycles or motor vehicles.

None of the counts captured people riding bikes on the sidewalk.

MAPS AND SUMMARY TABLE

The following maps and summary table provide snapshots of the data. The data shown represents averages of all available dates. Averages were calculated using the formulas listed below.

Weekend counts were conducted at eight locations. Since travel patterns are significantly different on weekends, this data has not been included in the maps and summary tables. It is included in the location data.

The peak hours of 8 am - 10 am and 5 pm - 7 pm represented the hours with the highest number of bicycles (averages for each site were added together).

AVERAGES - PER DAY

$$\text{Number of bikes} = \frac{\text{Total number of bikes counted on all days}}{1, 2, \text{ or } 3 \text{ (depending on number of days data was available)}}$$

$$\text{Number of motor vehicles} = \frac{\text{Total number of motor vehicles counted on all days}}{1, 2, \text{ or } 3 \text{ (depending on number of days data was available)}}$$

$$\text{Bikes as \% of total} = \frac{\text{Total number of bikes counted on all days}}{\text{Total number of all vehicles counted on all days}}$$

AVERAGES - AM PEAK

$$\text{Number of bikes} = \frac{\text{Sum of bikes counted each day from 8 am - 10 am}}{1, 2, \text{ or } 3 \text{ (depending on number of days data was available)}}$$

$$\text{Number of motor vehicles} = \frac{\text{Sum of motor vehicles counted each day from 8 am - 10 am}}{1, 2, \text{ or } 3 \text{ (depending on number of days data was available)}}$$

$$\text{Bikes as \% of total} = \frac{\text{Sum of bikes counted each day from 8 am - 10 am}}{\text{Sum of all vehicles counted each day from 8 am - 10 am}}$$

AVERAGES - PM PEAK

$$\text{Number of bikes} = \frac{\text{Sum of bikes counted each day from 5 pm - 7 pm}}{1, 2, \text{ or } 3 \text{ (depending on number of days data was available)}}$$

$$\text{Number of motor vehicles} = \frac{\text{Sum of motor vehicles counted each day from 5 pm - 7 pm}}{1, 2, \text{ or } 3 \text{ (depending on number of days data was available)}}$$

$$\text{Bikes as \% of total} = \frac{\text{Sum of bikes counted each day from 5 pm - 7 pm}}{\text{Sum of all vehicles counted each day from 5 pm - 7 pm}}$$

COUNT LOCATIONS

Counts were conducted at 24 locations in Boston. Sites are numbered based on an alphabetical listing.

LEGEND

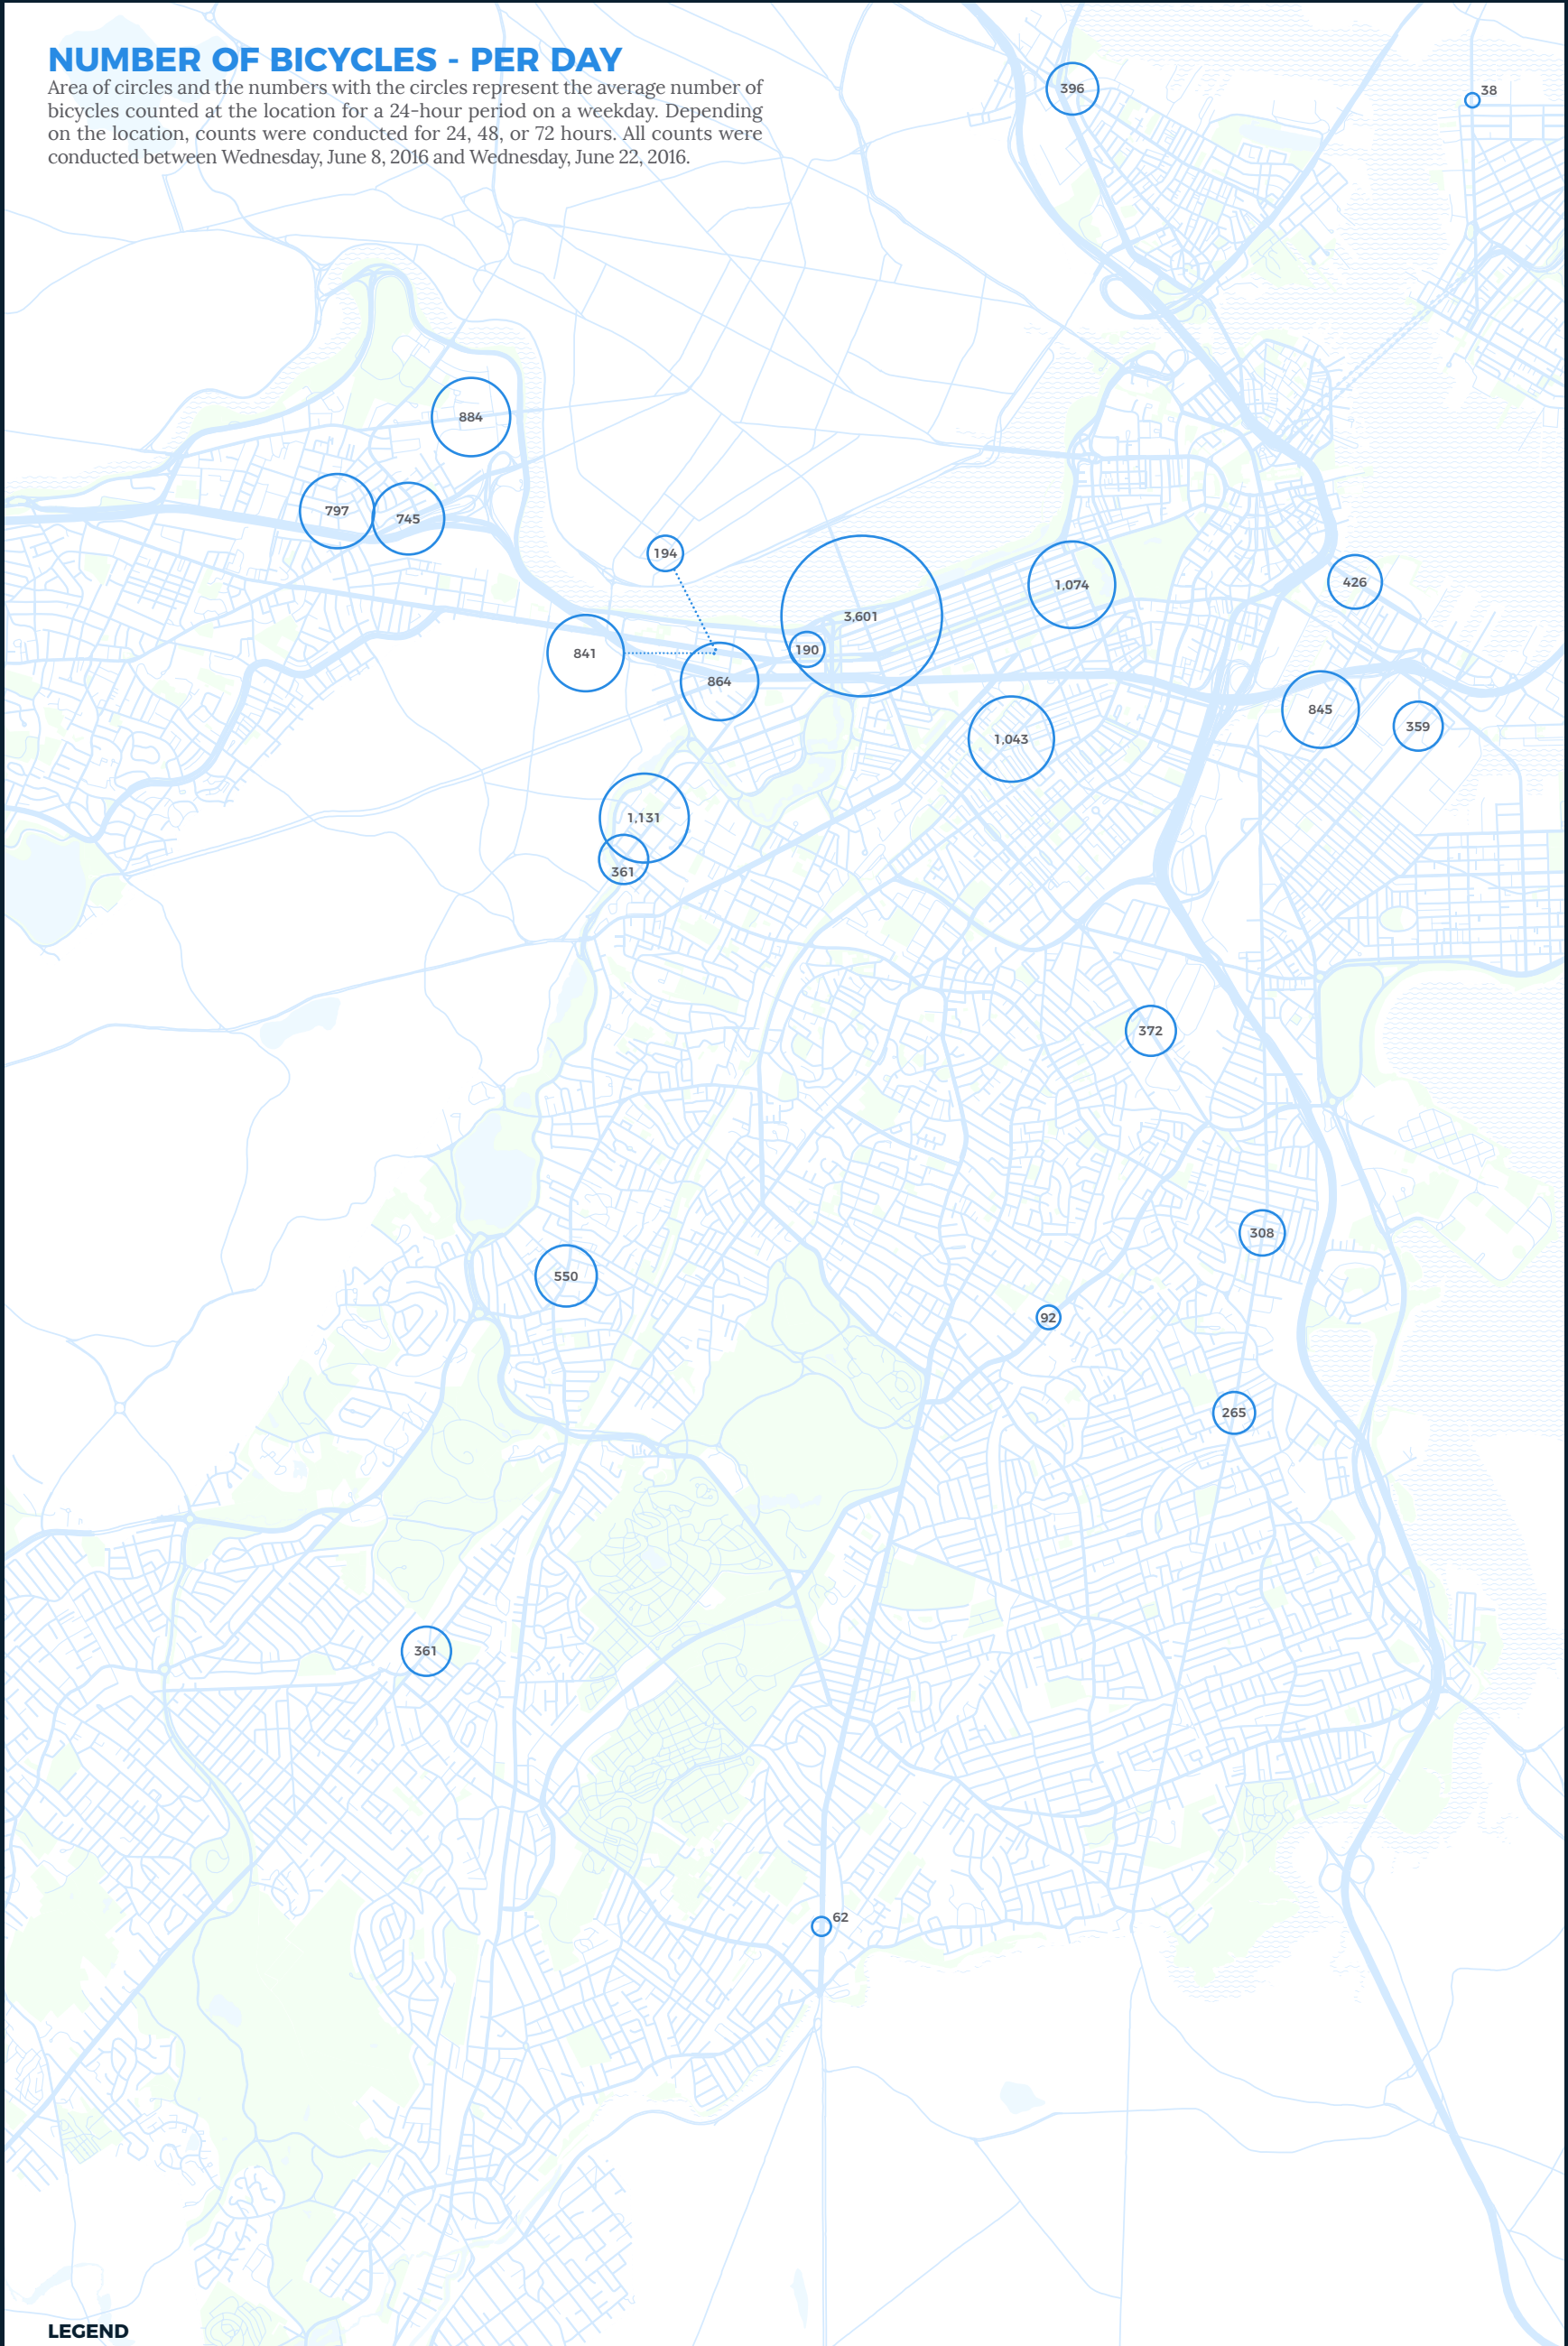

Sites listed alphabetically by street name. Bright blue numbers indicate the number of bicycles. Blue-gray percentages indicate bicycles as a percentage of all vehicles.

NUMBER OF BICYCLES - PER DAY

Area of circles and the numbers with the circles represent the average number of bicycles counted at the location for a 24-hour period on a weekday. Depending on the location, counts were conducted for 24, 48, or 72 hours. All counts were conducted between Wednesday, June 8, 2016 and Wednesday, June 22, 2016.

LEGEND

*Counts, except those that have dates marked with **, were conducted on consecutive days.

**Weekday count was conducted on Tue, 06/21.

***Weekend data is not included in the calculations on this sheet.

LOCATION DATA

Count data from each location is provided on subsequent pages. While most locations are two-way streets, some are one-way; the charts reflect this. Each page provides data for one 24-hour period and includes:

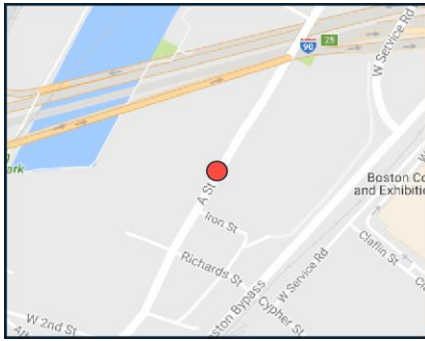

- A map showing the location where the count was conducted,
- The name of the location
- The date
- The weather
- Charts showing the total number of bicycles by hour of day and bicycles as a percentage of the total number of vehicles counted during each hour. There is one chart for the total, and two charts showing data based on direction (Northbound/Southbound or Eastbound/Westbound)
- A table with the number of bicycles, the number of motor vehicles, and bicycles as a percentage of the total number of vehicles broken out by hour of the day. This chart also breaks the data out by Northbound/Southbound or Eastbound/Westbound. Individual AM and PM peaks are highlighted in the rows that indicate the number of bicycles.

SEPTEMBER 2016 COUNTS

From Tuesday, September 27, 2016 to Thursday, September 29, 2016, 72-hour automated traffic counts were conducted at 60 locations across Boston.

These counts were conducted by taking video of each location for the specified period of time, then running the video through software that classified each vehicle as a bicycle or motor vehicle. Staff were sited at several locations to conduct counts by hand, which were then used to verify the accuracy of the automated counts. Some videos were also reviewed to further verify accuracy of the counts.

We chose video technology because it would allow us to take counts regardless of the street sweeping schedule. The downside to this approach is that videos do not accurately capture the speeds of drivers as they pass the count location.

Due to a technical issue, most of the Thursday data and some of the Wednesday data had to be discarded. In addition, the counting equipment was vandalized at one site. Sidewalk riding is not captured in these counts, including, for example, the westbound bike path on Seaver St.

MAPS AND SUMMARY TABLE

The following maps and summary table provide snapshots of the data. The data shown represents averages of all available dates. Averages were calculated using the formulas listed below.

The peak hours of 8 am - 10 am and 5 pm - 7 pm represented the hours with the highest number of bicycles (averages for each site were added together).

AVERAGES - PER DAY

$$\text{Number of bikes} = \frac{\text{Total number of bikes counted on all days}}{1, 2, \text{ or } 3 \text{ (depending on number of days data was available)}}$$

$$\text{Number of motor vehicles} = \frac{\text{Total number of motor vehicles counted on all days}}{1, 2, \text{ or } 3 \text{ (depending on number of days data was available)}}$$

$$\text{Bikes as \% of total} = \frac{\text{Total number of bikes counted on all days}}{\text{Total number of all vehicles counted on all days}}$$

AVERAGES - AM PEAK

$$\text{Number of bikes} = \frac{\text{Sum of bikes counted each day from 8 am - 10 am}}{1, 2, \text{ or } 3 \text{ (depending on number of days data was available)}}$$

$$\text{Number of motor vehicles} = \frac{\text{Sum of motor vehicles counted each day from 8 am - 10 am}}{1, 2, \text{ or } 3 \text{ (depending on number of days data was available)}}$$

$$\text{Bikes as \% of total} = \frac{\text{Sum of bikes counted each day from 8 am - 10 am}}{\text{Sum of all vehicles counted each day from 8 am - 10 am}}$$

AVERAGES - PM PEAK

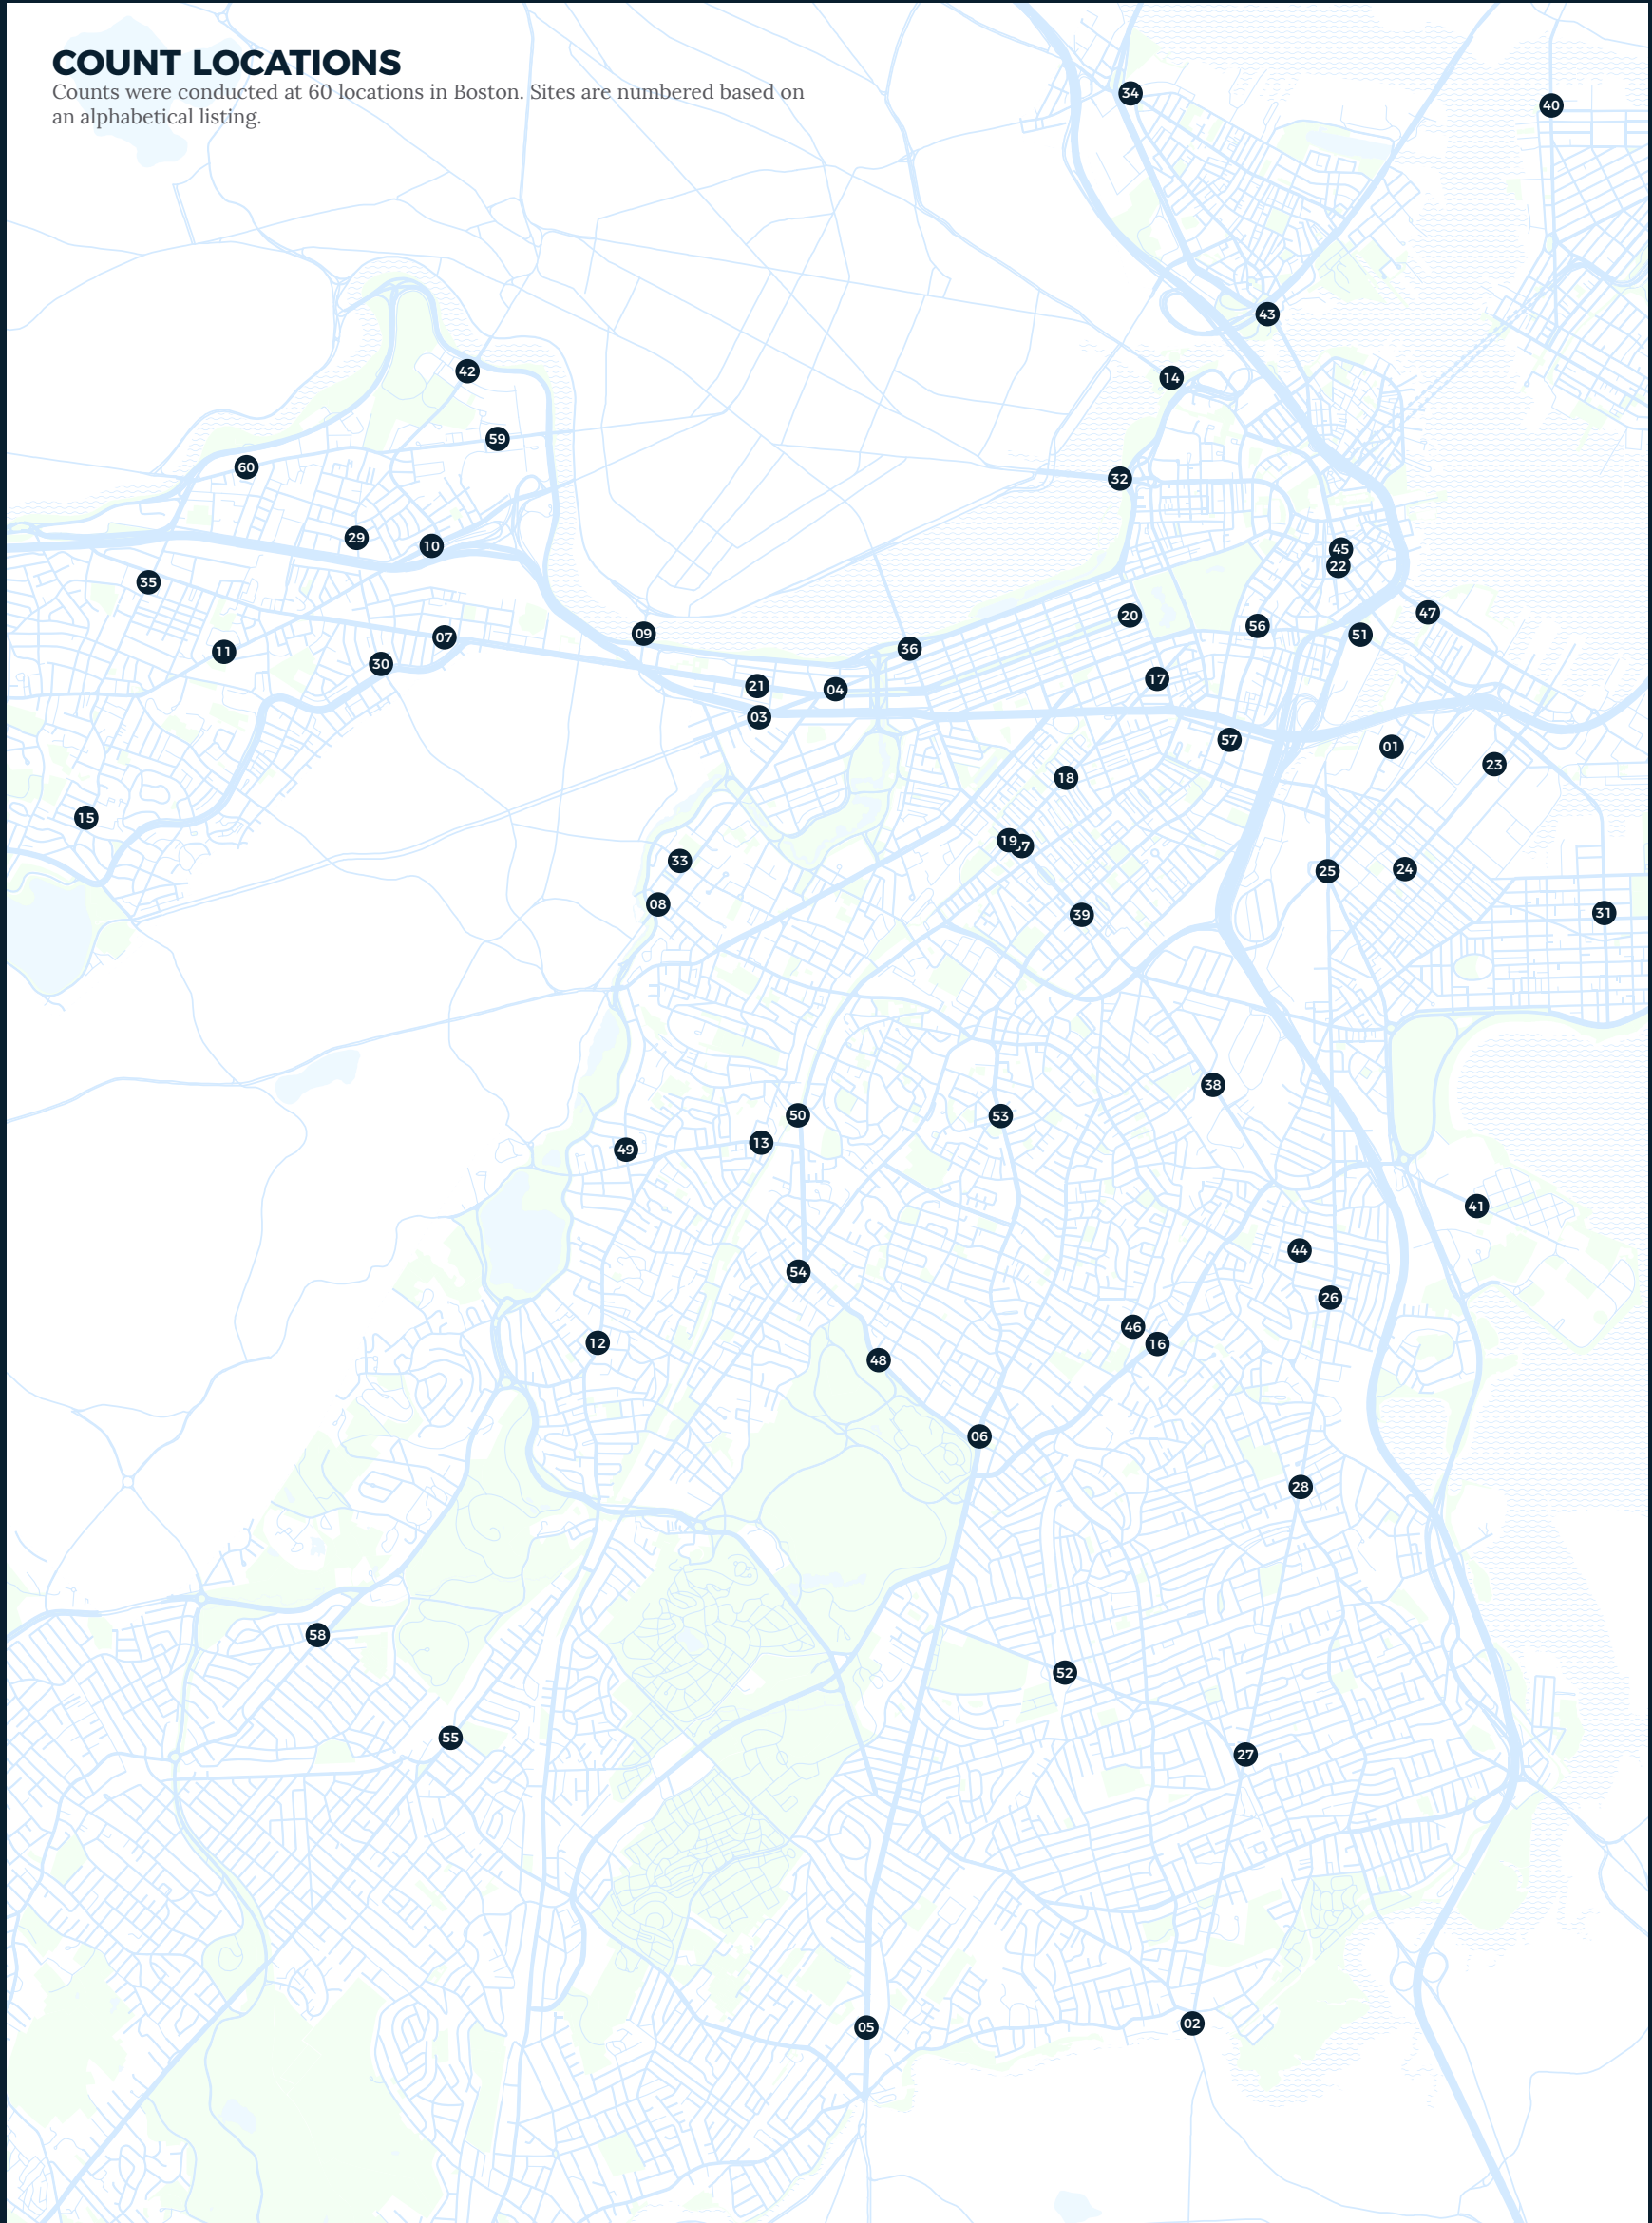

$$\text{Number of bikes} = \frac{\text{Sum of bikes counted each day from 5 pm - 7 pm}}{1, 2, \text{ or } 3 \text{ (depending on number of days data was available)}}$$

$$\text{Number of motor vehicles} = \frac{\text{Sum of motor vehicles counted each day from 5 pm - 7 pm}}{1, 2, \text{ or } 3 \text{ (depending on number of days data was available)}}$$

$$\text{Bikes as \% of total} = \frac{\text{Sum of bikes counted each day from 5 pm - 7 pm}}{\text{Sum of all vehicles counted each day from 5 pm - 7 pm}}$$

COUNT LOCATIONS

Counts were conducted at 60 locations in Boston. Sites are numbered based on an alphabetical listing.

LEGEND

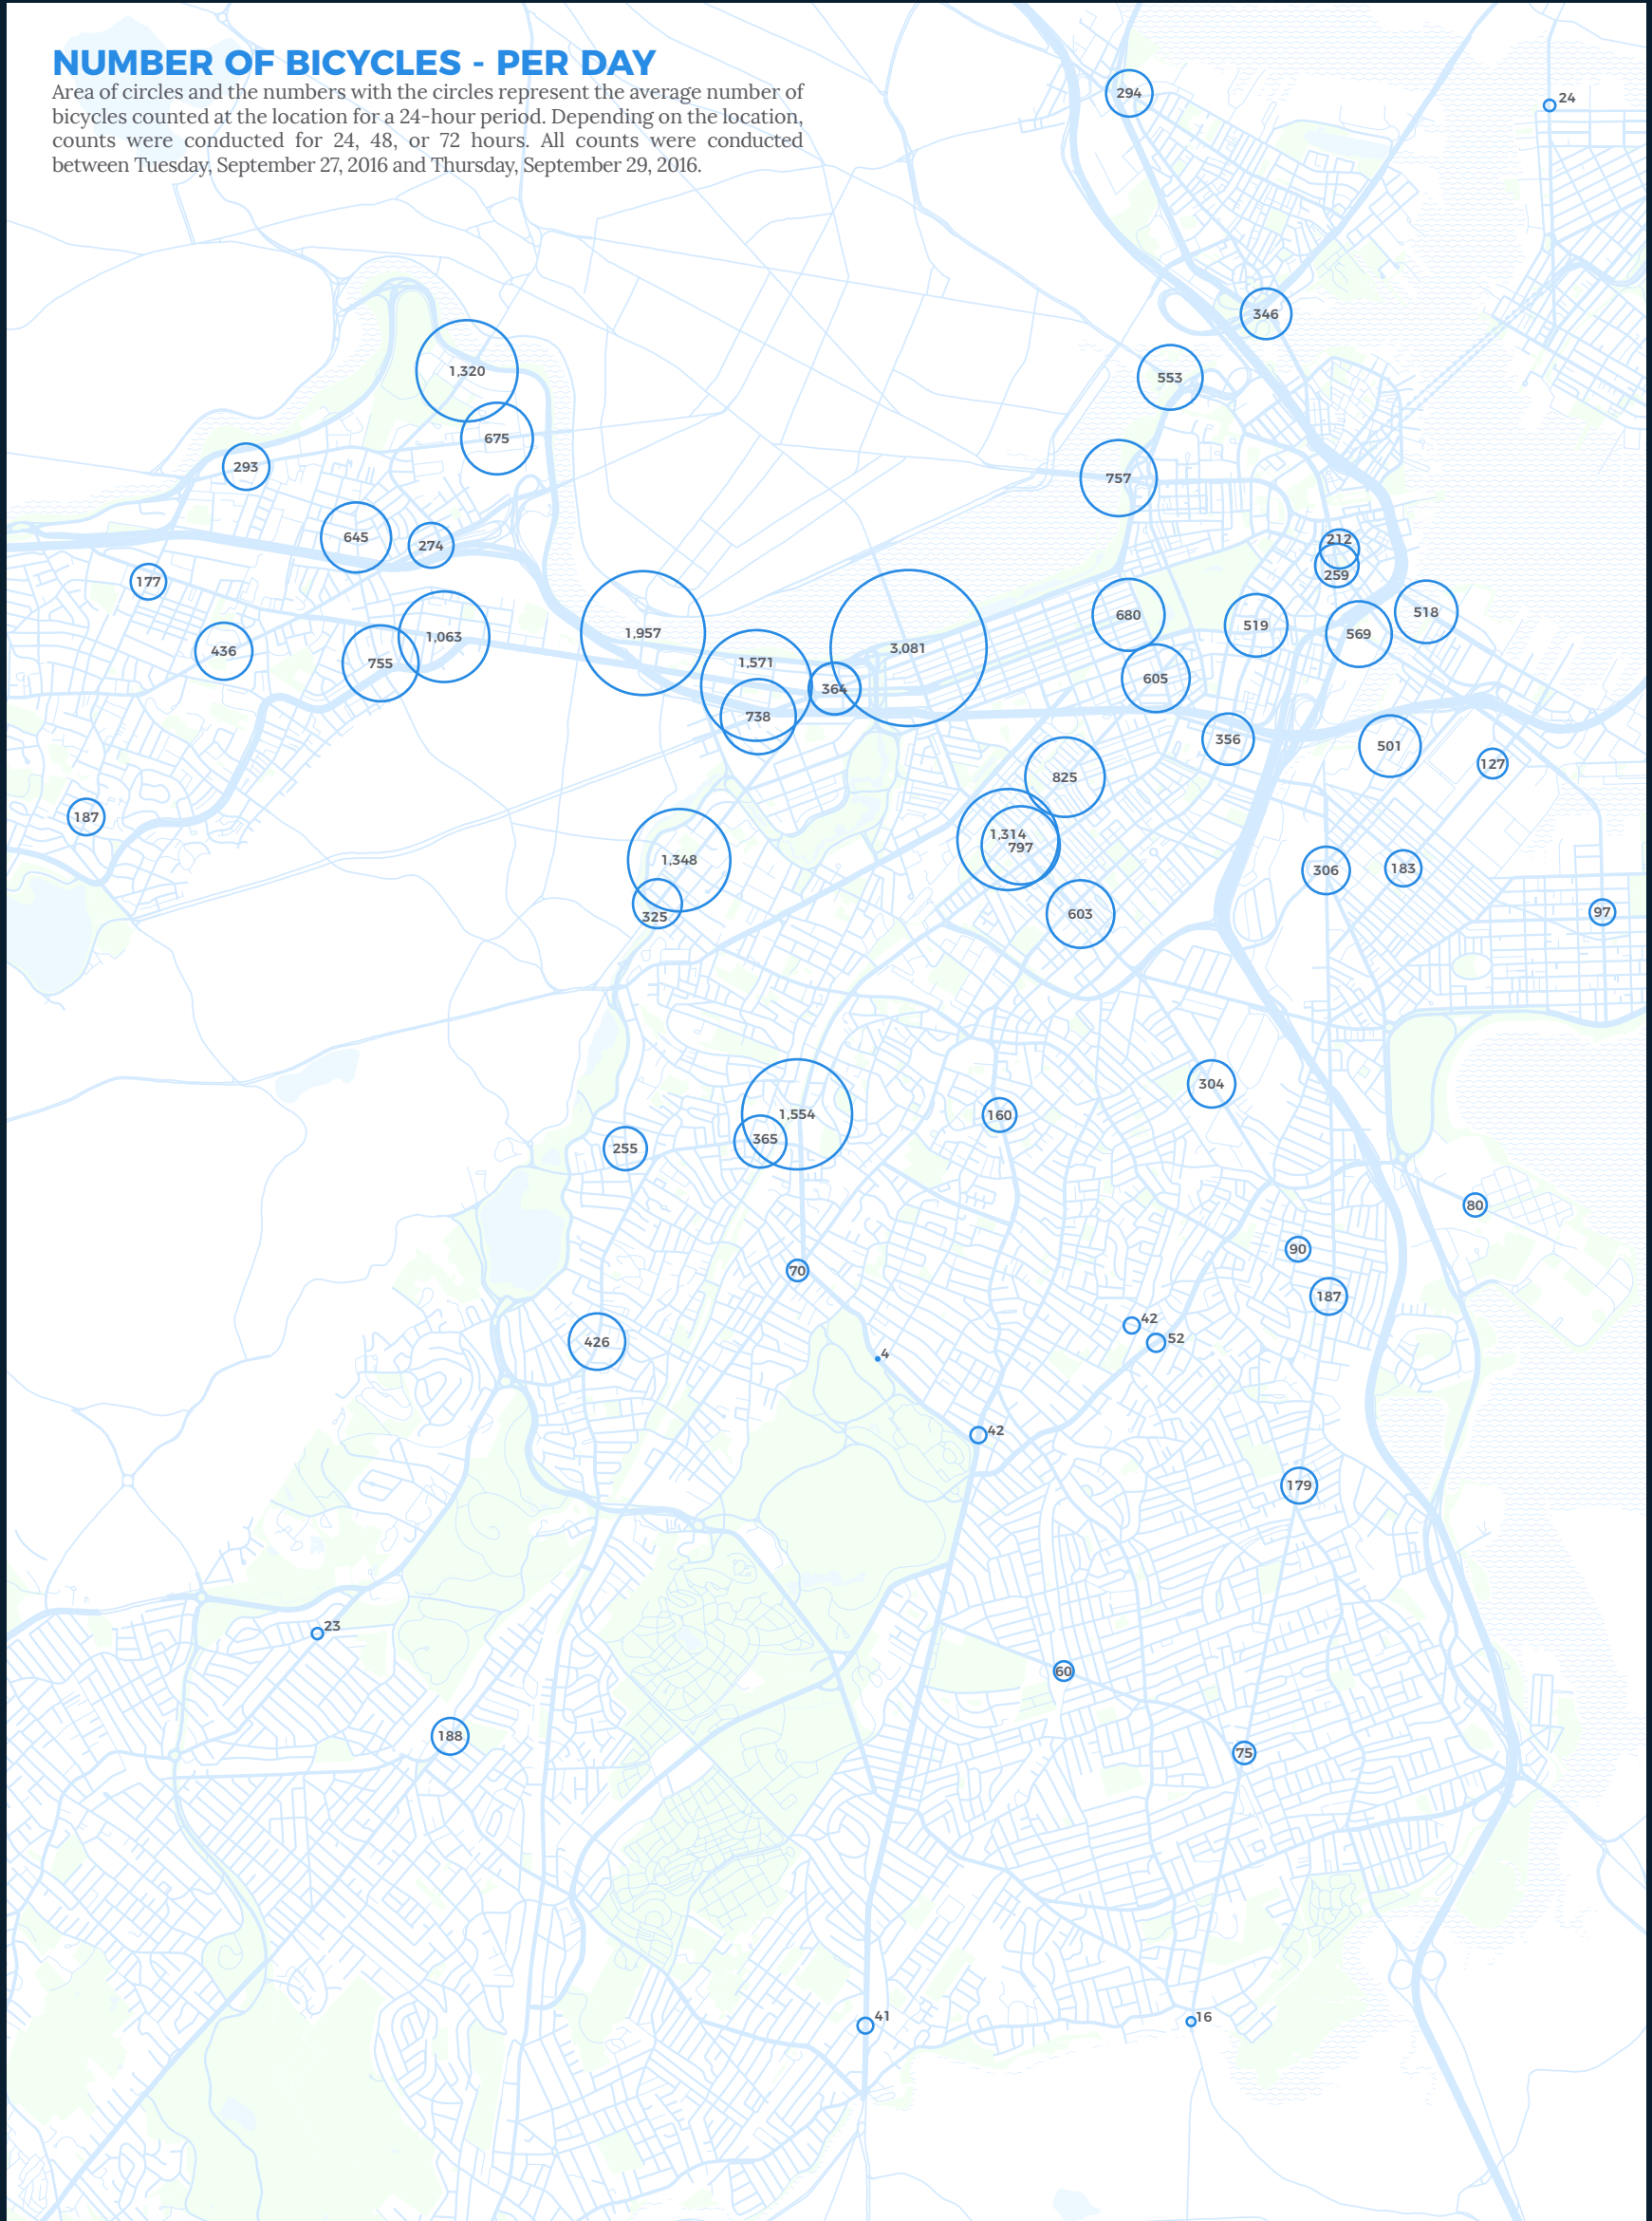

Sites listed alphabetically by street name. Bright blue numbers indicate the number of bicycles. Blue-gray percentages indicate bicycles as a percentage of all vehicles.

49 South Huntington Avenue south of Castleton Street	Mission Hill	2	255	11,152	2.24%	37	1,478	2.44%	51	1,343	3.66%
50 Southwest Corridor Bicycle Path south of Heath Street*	Jamaica Plain	2	1,554	277	84.87%	328	30	91.62%	358	64	84.83%
51 Summer Street east of Dorchester Avenue	Downtown	2	569	21,587	2.57%	114	2,983	3.68%	162	2,823	5.43%

*Motor vehicles were not counted on the Southwest Corridor Bicycle Path. The numbers in the motor vehicle columns are the numbers of pedestrians counted on the bicycle path. Percentages represent bicycles as a percentage of bicycles and pedestrians.

B CITY OF BOSTON BICYCLE COUNTS SUMMARY TABLE

Mayor Martin J. Walsh

September 2016

SITE NUMBER AND LOCATION

Sites are listed alphabetically.

NEIGHBORHOOD

OF DAYS

Start Date:
Tues, 09/27

PER DAY

AM PEAK (8 AM - 10 AM)

PM PEAK (5 PM - 7 PM)

The numbers listed below are averages calculated with the data from all available weekdays.

SITE NUMBER AND LOCATION	NEIGHBORHOOD	# OF DAYS	PER DAY			AM PEAK (8 AM - 10 AM)			PM PEAK (5 PM - 7 PM)		
			# OF BIKES	# OF MOTOR VEHICLES	BIKES AS % OF TOTAL	# OF BIKES	# OF MOTOR VEHICLES	BIKES AS % OF TOTAL	# OF BIKES	# OF MOTOR VEHICLES	BIKES AS % OF TOTAL
52 Talbot Avenue west of New England Avenue	Dorchester	2	60	13,017	0.46%	1	1,537	0.07%	16	1,826	0.87%
53 Warren Street north of Walnut Avenue	Roxbury	3	160	24,971	0.64%	24	3,025	0.79%	26	3,186	0.81%
54 Washington Street east of Beethoven Street	Jamaica Plain	2	70	15,973	0.44%	11	1,660	0.66%	11	1,764	0.62%
55 Washington Street north of Bexley Road	Roslindale	3	188	16,805	1.11%	39	1,867	2.05%	33	2,225	1.46%
56 Washington Street south of Hayward Place	Downtown	3	519	5,744	8.29%	141	658	17.65%	83	732	10.18%
57 Washington Street south of Herald Street	South End	3	356	8,688	3.94%	85	1,432	5.60%	68	1,040	6.14%
58 Weld Street west of Centre Street	West Roxbury	2	23	3,365	0.68%	3	328	0.91%	7	423	1.63%
59 Western Avenue east of Hague Street	Allston/Brighton	3	675	12,044	5.31%	130	1,558	7.70%	154	1,688	8.36%
60 Western Avenue west of Waverly Street	Allston/Brighton	2	293	15,288	1.88%	59	2,029	2.83%	64	2,303	2.70%

LOCATION DATA

Count data from each location is provided on subsequent pages. While most locations are two-way streets, some are one-way; the charts reflect this. Each page provides data for one 24-hour period and includes:

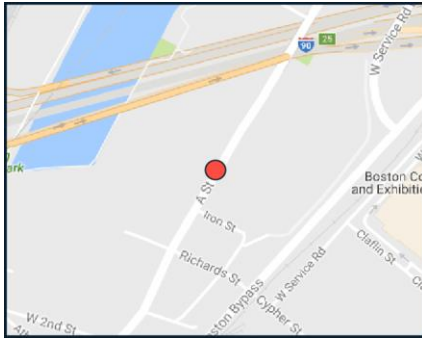

- A map showing the location where the count was conducted,
- The name of the location
- The date
- The weather
- Charts showing the total number of bicycles by hour of day and bicycles as a percentage of the total number of vehicles counted during each hour. There is one chart for the total, and two charts showing data based on direction (Northbound/Southbound or Eastbound/Westbound)
- A table with the number of bicycles, the number of motor vehicles, and bicycles as a percentage of the total number of vehicles broken out by hour of the day. This chart also breaks the data out by Northbound/Southbound or Eastbound/Westbound. Individual AM and PM peaks are highlighted in the rows that indicate the number of bicycles.
