

BENCHES

There are six benches in the park; two backed benches located by the entrance, four backless benches located on the center circle, two with arm rests. Benches are constructed of painted wood and steel.

CENTER AREA

The center of the park has a circular plaza with concrete and brick paving. This center area provides access to all play areas, accessible through the rubber surfacing pads.

VEGETATION

There are two small trees located along the northern end of the circuit path and a mature tree on the eastern end of the park. Additionally, there is a tree line along the north western end of the park near the retaining wall.

BACK WALL / SLOPE

A retaining wall is located along the western edge of the park. The rest of the western edge is a slope with rocks and a chain link fence at the tree line.

FENCES

There is a 4' chain link fence along the perimeter of the park except at the entrance and the south western edge of the park. Portions of the chain link fence are in poor condition.

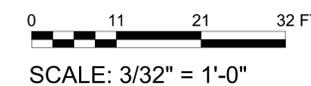

CURBS & PAVING

Concrete curbs are located between paths and existing play areas with +/- 6 inch difference in elevation. All walkways are concrete except for the painted asphalt play areas and brick accents in the center of the circle.
